

Requirement Analysis

Solution Requirements (Functional & Non-functional)

Date	08 September 2026
Student Name	Dwarapudi Nagasri
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	

Functional Requirements

Following are the functional requirements of the proposed solution, based only on the project instructions provided.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Network Request Service Catalog	Create a Network Request catalog item under Service Catalog with Network as the category.
FR-2	Network Request Form & Variables	Capture Requested For, Mobile Number, Type of Connection, Existing ID, Total Amount, Mode of Payment, Address, and the Opened on behalf of variable set.
FR-3	Dynamic Form Behaviour	Display the Existing ID field when Type of Connection is Existing; configure required field behaviour as specified.
FR-4	Network Database Record Creation	Create a Network Database record from the catalog submission with Database Number, Assignment To, Mobile Number, Total Amount, Mode of Payment, Type of Connection, Customer Address, Approval Status, and Requested For.
FR-5	Approval Request	Create and display approval requests related to the Network Database record and route the request through the configured approval step.
FR-6	Flow Designer Automation	On catalog submission, execute Get Catalog Variables, Create Record, Send Email, Ask for Approval, If/Else flow logic, and Update Record.
FR-7	Email Notifications	Send email notifications from the flow to relevant recipients using the configured target record.
FR-8	Request Status Tracking	Maintain Approval Status on the Network Database record so the current standing of the request can be viewed.
FR-9	Access Control	Use the default ACLs created for the custom table to restrict read/write access according to the configured access controls.
FR-10	Validation & Testing	Validate mandatory fields, auto-populate logic, approval state, request submission, approval, notification, and data accuracy through testing.

Non-functional Requirements

The following non-functional requirements are directly supported by the project instructions. Where a specific technical measure was not provided, it is marked as not specified rather than assumed.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple and intuitive request submission, dynamic forms, mandatory fields, and clear request/status visibility.
NFR-2	Security	Default ACLs on the custom table are used to restrict read/write access according to role.
NFR-3	Reliability	End-to-end testing validates approvals, task/record creation, notifications, data accuracy, and flow execution.
NFR-4	Performance	Faster request fulfilment and reduced manual effort are project objectives; no specific performance metric is provided.
NFR-5	Availability	The solution is implemented in ServiceNow/PDI; no separate availability infrastructure is specified.
NFR-6	Scalability	The solution uses a structured ServiceNow data model and Flow Designer automation; no specific scaling technology is specified.

Solution Requirements — Functional Coverage

FR	Functional Area	Coverage
FR-1	Service Catalog	Network Request catalog item under Service Catalog with Network as the category.
FR-2	Request Form & Variables	Requested For, Mobile Number, Type of Connection, Existing ID, Total Amount, Mode of Payment, Address, and Opened on behalf of variable set.
FR-3	Dynamic Form Behaviour	Existing ID field is displayed when Type of Connection is Existing; required field behaviour is configured as specified.
FR-4	Database Record Creation	Network Database record captures Database Number, Assignment To, Mobile Number, Total Amount, Mode of Payment, Type of Connection, Customer Address, Approval Status, and Requested For.
FR-5	Approval Request	Approval requests are created and displayed as related records and routed through the configured approval step.
FR-6	Flow Designer Automation	Catalog submission executes Get Catalog Variables, Create Record, Send Email, Ask for Approval, If/Else flow logic, and Update Record.
FR-7	Email Notifications	Email notifications are sent from the flow to relevant recipients using the configured target record.
FR-8	Status Tracking	Approval Status is maintained on the Network Database record so the current standing of the request can be viewed.
FR-9	Access Control	Default ACLs created for the custom table restrict read/write access according to the configured access controls.
FR-10	Validation & Testing	Mandatory fields, auto-populate logic, approval state, request submission, approval, notification, and data accuracy are validated through testing.
